

Class Alarm Help

Class Alarm is designed to provide a simple countdown alarm usable in classroom settings.

Usage

To use Class Alarm, simply enter the number of minutes and seconds to count down and press start. Note that Class Alarm will not sound if the phone volume is turned down or in silent mode. You can use Class Alarm with extension speakers/headphones.

Settings

- Vibrate: Turn this on to have the iPhone vibrate as the alarm sounds.
- Repeat Alarm: Turn this on to repeat until the Pause/Reset button is pressed. When off, the alarm sounds once and stops.
- Alarm: Choose from various built-in and user supplied alarms.

Adding Alarms

To add an alarm sound, you'll need to supply a file that is 30 seconds or less and is packaged as a .wav file. To install the alarm, use the iTunes file sharing option. To access iTunes file sharing, start by syncing your device to iTunes. Select the device from the DEVICES section on the left navigation bar, then select APPS on the top navigation bar. Scroll down to the bottom half of the display, and you'll see a section marked File Sharing. On the left is a list of apps that support file sharing. Select Class Timer. Click on the Add button to add a file to Class Timer's alarms (or simply drag the .wav file and drop it onto the file list).

Class Timer is one of a class of apps under the OTW umbrella. OTW (One Thing Well) apps are designed to focus on a single task, and provide the tools you need to accomplish that task. Rather than add lots of options (and cost) that most people don't need, we prefer to use that development effort to provide more tools you do need: rather than doing many things poorly, doing One Thing Well. So if you need a timer that resets your clock to Greenwich Mean Time, you probably want to look for another app (and there's probably one out there that does that). OTW allows us to keep our apps simple, effective, efficient, and inexpensive. Thank you for your support.
